DETAILED ACTION

1. Claims 1-14 are pending in the application, claims 1-10 are withdrawn from consideration

Election/Restrictions

2. Applicant's election of Group II, claims 11-14, in the reply filed on January 9, 2006 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Specification

3. The abstract of the disclosure is objected to because it contains two paragraphs. Correction is required. See MPEP § 608.01(b). The abstract must be one paragraph and 150 words or less.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1772

5. Claims 11-14 rejected under 35 U.S.C. 102(b) as being anticipated by Moore et al. (U.S. Patent No. 6,114,595).

Moore discloses an absorbent article (*title*) comprising a liquid permeable cover layer (*topsheet, title*), a liquid impermeable backsheet (*col. 4, line 32*) and an absorbent core (*col. 4, line 33*) positioned between the liquid permeable layer and the backsheet (*figure 2 and col. 4, lines 28-35*). The liquid permeable layer comprises an apertued film (*figure 3*) and with one or more profiled elements (*surface aberration, col. 9, lines 16-17*) and at least one performance additive (*col. 14, lines 24-29*).

The limitation “wherein said film is affected by a heat source and incremental force while positioned upon a forming apparatus so as to impart one or more profiled elements into said apertued film” is a method limitation and does not determine the patentability of the product, unless the process produces unexpected results. The method of forming the product is not germane to the issue of patentability of the product itself, unless Applicant presents evidence from which the Examiner could reasonably conclude that the claimed product differs in kind from those of the prior art. MPEP 2113.
